(54) **Package label assembly.**

(57) A package label assembly comprises a label sheet (10) and two copy sheets (11,12) adhesively connected along one edge. The copy sheets (11,12) are provided with lines of weakening (11a, 12a) so that these can be detached from the label sheet (10) and transfer material is provided to enable writing applied to the label sheet (10) to appear on the copy sheets (11, 12). A translucent or transparent front sheet (14) is provided which has pressure sensitive bands (14a 14b) and the front sheet (14) is attached to the label sheet (10) by the band (14a) adjacent same one edge of label sheet (10). The front sheet (14) is wider than the label sheet (10). Two strippable sheets (15, 16) are attached to the bands (14a, 14b). The sheet (15) lies on the side of the copy sheet (12) remote from the front sheet (14) and the sheet (16) lies between the label sheet (10) and the front sheet (14).

In use, the front sheet (14) can be turned back so as to write on the label sheet (10). The strippable sheets (15, 16) may thus be removed so that the margins of the front sheet (14) can be adhesively connected to a package. The copy sheet (11, 12) can be removed as required.
