 **Lamp assembly to be socketed, with tubular body apt to be received in the seat.**

 A lamp assembly to be socketed into a seat (S2), formed in a wall or in a panel or other, includes a tubular body (1) capable of receiving the lamp-holder (7) or the lamp, and capable of being received into the seat (S2), said tubular body having at the open end an external flange (10) able to engage a finishing fram-like ring (14), while at the opposite side the tubular body has a closing head (3) which engages a connection box (5). On the tubular wall (1) guide means are provided to engage and axially adjust the lamp-holder (7), in particular through pressing-screw means. The frame-like ring (14) is insertable and may be developed to engage a cone inside of the tubular body (1), and the head (3) is applicable to several tubular bodies (1) having different diameters.
