⑤4 Washing machine with means for producing an oxidising solution of sodium hypochlorite.

57) The automatic laundry washing machine comprises a container (10) for the salt (NaCl), a water reservoir (17) connectable to a water source, and a cell (20) for the electrochemical production of sodium hypochlorite (NaClO) and hydraulically connected to the reservoir by way of the salt container (10). The water reservoir (17) is also hydraulically connected to the cell (20) by a further path (31), which enables the cell to be filled with water to a predetermined height (A-A) by using the water which exceeds a given level in the reservoir (17).
