54 A device for projecting against burglary.

57 The invention relates to a device for protecting against burglary, of the type, with which a bolt catching case (2) mounted on or in a frame (1) and cooperating with a lock (3) in or on a hinged panel, is connected with an active element (13) by means of a core line (6) protected by an outer sheath (6a), said core line extending through a guide opening (7) in said lock catching case towards a fixed anchoring location (8), in such a way, that in case of a displacement of the bolt catching case as a result of an attempt at burglary the active element will be moved to close an alarm circuit, whereby the core line is arranged to hold the active element against spring (15) action in an inoperative position, an auxiliary element (9) being mounted on the frame adjacent the guide opening for the core line, said auxiliary element cooperating, in case of a forced displacement of the bolt catching case, with the portion of the bolt catching case delimiting said guide opening so as to perform a scissor action onto said core line.
