54 **Garment hanger.**

57 A garment hanger has a support structure (1) of plastics material and a hook (2) which is integrally formed with the support structure or is a metal hook. The hook is connected to a part (7) integral with the support structure. The part (7) is sufficiently rigid to support the hook in an upward direction but also bendable to allow the hook to be moved to a downwardly extending direction. Preferably the part (7) has

two portions of reduced thickness, with bevelled edges, to facilitate bending. The bevelled edges are on both sides of the part (7). Conveniently, the support structure (1) has a portion (3) which is concave in form to allow the hanger to be placed adjacent the throat of a user when inspecting a garment for length and appearance.
