54 Cabinet for a refrigerator appliance with at least two preservation compartments and with insulation of foamed synthetic material.

57 In a cabinet for a refrigerator appliance with two spaced-apart preservation compartments (2,3), which are each formed from a front-open liner (4,5), operate preferably at different temperatures and are disposed one above the other with an intermediate separation zone (8) therebetween and having insulation (9) in the form of synthetic material foamed in-situ to surround and penetrate between said liners to rigidly join them together, and further comprising an outer housing (10), a flexible element (11) is provided adhering to the two liners (4,5) in order to selectively intercept access to said separation zone (8).
