54 **Framework of draught excluder strip for pieces of furniture such as refrigerators and the like.**

57 In a framework for closing the aperture between facing edging sections of a fixed part (1), for example a refrigerator cabinet or the like, and another part (1) which moves relative to it, for example a door, the framework consists essentially of a draught excluder profile (4) of flexible material attached to the edge section (3) and carries, if required, a body of magnetic material (10) along one of its face sides.

For sealing off a possible uneven aperture of a door in an accurate way, two end sections of two draught excluder profiles (4, 4') to be joined to each other are connected to each other by means of a connecting piece (11).
