Silver halide color photographic light-sensitive material.

A silver halide color photographic light-sensitive material comprising a reflective support bearing thereon a photographic component layers including at least a blue-light-sensitive silver halide emulsion layer, a green-light-sensitive silver halide emulsion layer and a red-light-sensitive silver halide emulsion layer; wherein at least one layer of said photographic component layers contains at least one dye capable of being water-soluble or being decolorized by a development processing liquid, and a compound capable of releasing a development inhibitive substance or the precursor thereof through a reaction with the oxidation product of a color developing agent, and the optical reflection density of said silver halide color photographic light-sensitive material in 470 nm, 550 nm or 680 nm is not less than 0.5.
