54 **Ring binder for collection and/or display of sheet-shaped information carriers.**

57 Device for display and possible collection of sheet-shaped information carriers. The device comprises firstly a bottom plate (10) provided with a display aperture (20) intended to be positioned on e.g. the picture pane of an overhead projector, and secondly on two opposite sides of the display aperture (20) two ring mechanisms (22, 24) for retaining the information carriers, which preferably have double perforations along two opposite edges. Preferably, the ring mechanisms (22, 24) are coupled together with a transfer device (34, 38, 40) adapted to be actuated by means of an operating handle (48) for alternately opening and closing the two ring mechanisms (22, 24). If desired, the bottom part (10) is provided in conventional manner with back parts (16, 18) and binder covers (12, 14) in order at the same time to constitute a collection binder for the inserted sheet-shaped information carriers.
