54 Improvements in or relating to display systems, partitions and the like.

57 The invention provides a display system comprising a plurality of panel assemblies (25) which are adapted to be selectively connectable to each other in two alternative ways, the first is by providing hinging means (31) between adjacent panel assemblies (25) to form a rigid but foldable display structure. The second is by providing a plurality of poles (32) having elongate channels therein adapted to receive correspondingly shaped pegs (35) which are in turn securable to respective panel assemblies such that a rigid but non-foldable display structure can be assembled.
