54 Launchable pyrotechnic charge with electric fuse.

(1), e.g. for the generation of a smoke screen, comprising propellant and disperser charges (21, 25) ignitable by an electric squib (7).

In the inoperative state the squib terminals (8, 9) are short-circuited whereby any unintentional firing by stray currents is prevented. Preferably a Faraday cage (6) is provided to shield off the squib (7) against radio frequency interference. It is further preferred to incorporate the disperser charge (25) into an axial, perforated tube (23).

X: particularly relevant if taken alone
Y: particularly relevant if combined with another document of the same category
A: technological background
O: non-written disclosure
P: intermediate document

T: theory or principle underlying the invention
 E: earlier patent document, but published on, or after the filing date
 D: document cited in the application
 L: document cited for other reasons

&: member of the same patent family, corresponding document
