54

Device for projecting out and sliding doors of cabinets and the like.

57

It is described a device for projecting out and sliding doors for furniture and the like which is applicable to a piece of furniture provided with at least a pair of doors. The device in question allows to place the doors of the piece of furniture staggered over two parallel planes when they are to slide one above the other for the opening of the piece of furniture and to place the same onto the same plane when the piece of furniture is closed. Passage from

one condition to the other takes place by such a displacement of the door provided with this device, which is normal to the direction of sliding of the door itself and more precisely it is a jutting out displacement with respect to the piece of furniture for bringing the doors to their staggered condition and a displacement towards the piece of furniture for bringing back the doors to the aligned condition.
