A carding machine having fixed caps with elastic yielding, inclination adjustment, and a lower carding grid.

The bars (10) forming the caps are arranged along the whole periphery and are applied to the flanks (12) by screw means (30, 42) for the adjustment of the inclination of the surfaces provided with clothing, in respect to the tangent to the rotating drum (1) of the card in the application zone; yieldings of the bar (10), in a substantially radial direction, are allowed by the intervention of elastic means (34). The lower bars make up a carding grid.
