54 **An arrangement for asymmetric lighting.**

57 An asymmetric lighting device comprises a reflector (1) with a light source (3) provided in its rear portion. The reflector (1) surrounds and is closely adjacent the rear portion of said light source (3), preferably at a distance of 2 mm and it comprises a portion (4) screening the area directly below said light screen. The reflector (1) may be composed of triangular

facets. At the reflector (1) end most remotely from said light source (3) this portion may be truncated and replaced by one or more louver lamellae preferably three, which are inclined in an angle with the perpendicular on the working plane which is, preferably 56, 3°.
