54 Simulated gift wrap box.

57 A gift-wrap box having a body member (13, 14, 15) and a cover member (11, 12) which may be hinged thereto is folded from a blank of paperboard so that when the box is closed the box ends give the appearance of being wrapped with a separate piece of wrapping paper. If the box has square ends the box ends expose a pair of isosceles triangles (19, 20, 23, 24) aligned at their apexes. If the box has rectangular ends the box ends expose a pair of isosceles triangles or trapezoids which overlap, either completely or partially. The exterior surface of the blank may be colored or decorated to resemble gift wrapping paper.
