54 **Connecting port.**

57 A connecting port (6, 7) of plastic material, intended e.g. for a container filled with a liquid used in infusion, comprises a channel part (11, 12) with a breakable member (18, 19), the said channel part - (11, 12) being located at least partly between the edge seam (5) of the plastic film wall parts (2, 3) of the container (1), and a covering part (13, 14) in connection with the channel part (11, 12). The channel part (11, 12) and the covering part (13, 14) are substantially located one after another and the point of junction (17) between them lies in the area of the edge seam (5) between the wall films (1, 2). The closing part (15) of the covering part (13, 14) is at least partly placed in a space (28) limited by the parts (26, 27) of the wall films (1, 2) and forming a prolongation of the channel part (11, 12). Through the space (28) the channel part (11, 12) is in connection with the edge (23) of the container (1) after the covering part (13, 14) has been removed.
