54 **Refrigerated cabinet.**

57 A refrigerated cabinet (10) which is particularly adapted for bar counters, and the like, is compartmented into two or more cells (1, 2, 3) refrigerated at temperatures independently controllable and regulatable for each cell. Two or more refrigerated cells (1, 2, 3) are associated with a common refrigerating machine (6, 7, 8, 9) having its evaporator (9) housed in a cold-distributing chamber (19) which is separately connectable to each single refrigerated cell (1, 2, 3) through a corresponding fan (11, 12, 13) which is apt to generate an air flow from the cold-distributing chamber (19) toward the respective refrigerated cell (1, 2, 3). In each one of the refrigerated cells (1, 2, 3) a thermal detector is provided controlling both the refrigerating machine (6, 7, 8, 9) and the fan (11, 12, 13,) associated with the respective refrigerated cell (1, 2, 3) whenever the temperature within said cell rises up to a higher limit, and until this temperature drops down to a lower limit.
