⑤④ **Ski binding for cross-country skiing.**

⑤⑦ The ski binding for cross-country skiing comprises a plate associable with a ski and having lateral engagement grooves (6) for a pin (29) forwardly projecting from a toe piece (14) of a footwear article (30). With the plate there is associated an elastically oscillable element (35) adapted to permit disengagement of the footwear. A locking element (24) of the pin is journaled in the grooves (6) and cooperates with an adjustable safety element (17) associated with a toe piece (14) journaled to the plate itself. Further, the locking element (24) cooperates with an elastically deformable element (33) adapted to permit disengagement during the phase of opening of the locking element (24) from the pin. Furthermore, to the plate (2) there is journaled a release element (9) cooperating with prearranged engagement elements (22) formed at the toe end of the footwear.
