㉙ **Antipilferage marker for clothing or similar articles.**

㉚ A marker (10) is provided for attaching to articles to be identified, such as clothing in a retail store. The marker includes a body section (14) and a head section (12). The body section retains an amorphous metal ribbon (16). The head section includes a smooth pin (20) and a separate, grooved pin (26). When properly connected together, the smooth pin extends through the article with the distal end of the pin received in an aperture in the body section. The grooved pin remains free of the article but extends into and engages a lock assembly in the body section so as to positively retain the head and body sections together. Since only the smooth pin passes through the article, damage to the fabric is prevented. Further, the grooved pin provides positive retention of the head and body sections together resisting unauthorized removal of the marker from the article.
