D-8000 München 2(DE)(54) **Shore strut assembly for supporting sheathing wall.**

(57) A strut assembly (20, 60, 70) for supporting a sheathing wall (10) is provided. The strut assembly includes a plurality of blocks (21, 22, 23, 61, 62) each connected in series to form a parallelepiped as a whole. At least one (21, 62) of the blocks is fastened to one end of a shore strut (14) for forming an extension of the shore strut and for receiving pressure acting on the sheathing wall (10) together with the shore strut (14). At least one end face (21d, 62c) of one block (21, 62) abuts against one end face (22c, 61c) of the adjacent block (22, 61) at an angle inclined relative to a plane (y) normal to a longitudinal axis (x) of the shore strut and the shore strut assembly so that when disassembling the shore strut assembly (20, 60, 70) after use, the one block (21, 62) slides along with the inclined angle by the action of the pressure along the longitudinal axis of the shore strut and the shore strut assembly so as to be disengaged from the adjacent block (22, 61).
