(54) Centrifugal separation case assembly.

(57) There is disclosed a centrifugal separation case (1) assembly adapted to a continuous type centrifugal separation apparatus in which the twist of communication tube (15) used for injection of the liquid, for example the blood, and for discharge of the separated components such as the red blood cell etc. is positively prevented, further, the complete separation and the short time separation can be realized using the separation case (1), and the rigidity of the tubes (15, 16, 17, 18) provided for the injection and discharge is improved.
