(54) Sealable envelopes.

(57) An envelope suitable for use in automatic teller machines is composed of two separate sheets of material forming a rectangular front panel 10 and a rectangular back panel 20 respectively. The front panel 10 and back panel 20 are adhesively secured along three marginal edges 12,13,14 and a closure flap 15 extends from the front panel 10 along its unsecured edge 11. The surface of the closure flap facing the back panel carries an adhesive substance 16 whereby the closure flap may be folded along the said unsecured edge 11 over the back panel 20 and secured thereto to close and seal the envelope. The material of one of the panels is a translucent paper receptive to conventional printing processes and adapted to permit visual inspection of the envelope contents when the envelope is sealed.
