54 **Security barriers.**

57 Securing premises against unauthorised entry such as by way of a door, requires that the door construction be resistant against tampering and forced opening. Often such doors have to be able to be fitted quickly. To that end we provided a security barrier having a panel member (1) hingedly connected to a first jamb (2) by hinge means (6) to the rear of the panel member (1), and releasable locking means at the rear of the panel member (1) for locking the panel member (1) to a second jamb (3). By providing panel sides which extend to cover the hinge means (6) and the locking means, access to same is obstructed from the front of the panel member (1).

Having the first and second jambs (2, 3) in the form of an open mouthed channel member (49, 60) and providing them with clamping means (44, 64) enables them and hence the barrier to be fitted particularly easily about in situ jambs (62, 63).
