54 Child-proof safety gate.

57 A child-proof safety gate for a doorframe or other threshold (F), comprising a stationary frame comprising two wings (12,13), having outer edges adapted to engage corresponding vertical sides of the threshold, and a base (14) interconnecting the wings, and a wicket (11), complementary in shape to the stationary frame, hinged (15) to an inner edge of one of the wings, the hinge axis being inclined to the vertical in use such that the wicket tends to swing open about the hinge from a closed position, generally co-planar with the stationary frame, to an open position, under its own weight.
