## 54 Terminal module.

⑤ A terminal module provides for attaching components to electrical terminals of a termination frame. The terminal module utilizes an integral printed circuit board having a component assembly potted within a rectangular plastic shell with the remaining portion of the printed circuit board protruding from the shell for use as electrical terminals and for physical attachment to screw terminal strips of the termination frame. The modules are of a predetermined geometric configuration, and the potted component assembly portion is contoured to fit between respective ones of stacked terminal strips.

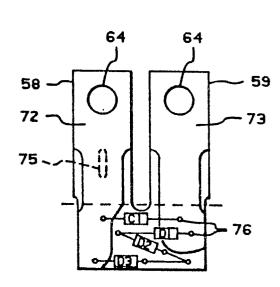

FIG. 4A.

X: particularly relevant if taken alone
Y: particularly relevant if combined with another document of the same category
A: technological background
O: non-written disclosure
P: intermediate document

T: theory or principle underlying the invention
E: earlier patent document, but published on, or after the filing date
D: document cited in the application
L: document cited for other reasons

&: member of the same patent family, corresponding document
