54 **Silver halide color photographic material and color photographic print.**

57 A silver halide color photographic material is described, comprising a reflective support composed of a vinyl chloride resin containing a white pigment and having thereon in an appropriate order at least one red-sensitive silver halide emulsion layer containing a cyan color forming coupler represented by the general formula (1) or (2) shown below, at least one green-sensitive silver halide emulsion layer containing a magenta color forming coupler represented by the general formula (3) or (4) shown below, and at least one blue-sensitive silver halide emulsion layer containing a yellow color forming coupler represented by the general formula (5) shown below

EP 0 270 078 A3

wherein R_1 , R_4 and R_5 each represents an aliphatic group, an aromatic group, a heterocyclic group, an aromatic amino group or a heterocyclic amino group; R_2 represents an aliphatic group; R_3 and R_6 each represents a hydrogen atom, a halogen atom, an aliphatic group, an aliphatic oxy group or an acylamino group; R_7 and R_8 each represents a substituted or unsubstituted phenyl group; R_9 represents a hydrogen atom or a substituent; R_2 and R_3 or R_5 and R_6 may be connected with each other to form a 5-membered to 7-membered ring; Q represents a substituted or unsubstituted N-phenylcarbonyl group; Z_a and Z_b , which may be the same or different, each represents a group of $-CH=$, a group of

or a group of $-N=$; R_{10} represents the same substituent as that represented by R_9 ; and X_1 , X_2 , X_3 , X_4 and

X_s each represents a hydrogen atom or a group capable of being released upon a reaction with an oxidation product of an aromatic primary amine developing agent.

The silver halide color photographic material provides a color photographic print having color images of excellent sharpness and good smoothness.

A color photographic print comprising a reflective support composed of a vinyl chloride resin containing a white pigment and having thereon in an appropriate order at least one emulsion layer containing a cyan dye obtained by a reaction of a cyan color forming coupler represented by the general formula (1) or (2) shown above with an oxidation product of an aromatic primary amine developing agent (CD), at least one emulsion layer containing a magenta dye obtained by a reaction of a magenta color forming coupler represented by the general formula (3) or (4) shown above with a CD, and at least one emulsion layer containing a yellow dye obtained by a reaction of a yellow color forming coupler represented by the general formula (5) shown above with a CD is also described.
