㉑ Silver halide color photographic light-sensitive material.

㉒ A silver halide photographic light-sensitive material which has improved image quality and storage stability is disclosed. The material comprises a support having thereon at least two silver halide light-sensitive emulsion layers, said layers having sensitivity in the same spectral region but different speed from each other, and at least one non-light-sensitive hydrophilic colloid layer, wherein said hydrophilic colloid layer is interposed between a higher speed layer and a lower speed layer of said silver halide light-sensitive emulsion layers, and said higher speed layer has a dry layer thickness of 1.6 μ or less and said hydrophilic colloid layer has a dry thickness of 0.2 to 1.5 μ .
