54 Paper container with handles in the form of a bag.

57 The object of the invention is a bag (1) made of paper which has carrying handles (4) that are glued to and fully wrap around the bag body so as to enhance the bag's load resistance. Given that said handles, also of paper and which are folded over and reinforced with natural fibres, are a continuous band, they have to be properly folded so as to adhere correctly to the bag.
