54 **Reversal silver halide light-sensitive photographic material having improved stability against processing.**

57 A reversal silver halide light-sensitive photographic material having improved stability against processing is disclosed. The photographic material comprises a support and photographic component layers including at least two silver halide emulsion layers having different spectral sensitivity from each other, in which at least one layer of the silver halide emulsion layers contains a pyrazoloazole-type magenta coupler, and at least one layer of the photographic component layer contains a compound which is capable of releasing either a development inhibitor or a compound capable of releasing a development inhibitor.
