**Silver halide color photographic material.**

A silver halide color photographic material comprising a support having thereon at least one silver halide emulsion layer, wherein the silver halide color photographic material contains (1) at least one compound selected from the group consisting of compounds represented by the general formula (I), (II) or (III) and dimers or higher polymers containing at least one moiety derived from the compounds, and (2) at least one compound selected from the group consisting of organic color fading preventing agents represented by the general formula (IV) and dimers or higher polymers containing at least one moiety derived from the agents, organic metal complexes containing copper, cobalt, nickel, palladium or platinum as the central metal and having at least one organic ligand having at least one conformation and dimers or higher polymers containing at least one moiety derived from the complexes:

wherein  $R_1$  and  $R_2$  each represents an aliphatic group, an aromatic group or a heterocyclic group;  $X$  represents a group capable of being released upon a reaction with an aromatic amine developing agent;  $A$

represents a group capable of reacting with an aromatic amine developing agent to form a chemical bond;  $n$  represents 0 or 1;  $B$  represents a hydrogen atom, an aliphatic group, an aromatic group, a heterocyclic group, an acyl group or an aliphatic or aromatic sulfonyl group;  $Y$  represents a group capable of accelerating the addition of an aromatic amine developing agent to the compound represented by the general formula (II); wherein  $R_1$  and  $X$ , or  $Y$  and  $R_2$  or  $B$  may be connected to each other to form a cyclic structure;  $R$  represents an aliphatic group, an aromatic group or a heterocyclic group; and  $Z$  represents a nucleophilic group or a group capable of being decomposed in the photographic material to release a nucleophilic group,

wherein  $R_{30}$  represents an aliphatic group, an aromatic group or a heterocyclic group;  $R_{31}$  represents a hydrogen atom, an aliphatic group, an aromatic group, a heterocyclic group or

R<sub>32</sub>, R<sub>33</sub> and R<sub>34</sub>, which may be the same or different, each represents an alkyl group, an alkenyl group, an aryl group, an alkoxy group, an alkenoxy group or an aryloxy group; W represents -O-, -S- or

R<sub>35</sub> represents a hydrogen atom, an aliphatic group, an aromatic group, a heterocyclic group, an acyl group, a sulfonyl group, a sulfinyl group, an oxy-radical group or a hydroxy group; wherein R<sub>30</sub> and R<sub>31</sub>, or R<sub>35</sub> and R<sub>30</sub> or R<sub>31</sub> may be connected to each other to form a 5-membered to 7-membered ring.
