(57) Disclosed is a silver halide photographic material containing at least one dye compound of the following formula (I) and a yellow colloidal silver:

wherein all the symbols are defined in the specification.

By the combination of the dye compound and the yellow colloidal silver, the filter effect and the antihalation effect are improved. The dye compound (I) may be discolored or dissolved out after the material has been photographically processed so that this does not have any bad influence on the photographic property of the material. Further, the compound (I) is stable after the material has been stored long.
