54 **Automatic system for the orderly parking of motor vehicles.**

57 The instant invention concerns an automatic system for the parking of motor vehicles, comprising a circular structure on several levels, each level having an annular track (1), on which several concentric rings (2) are mounted which are able to rotate and on which the vehicles are actually parked; there being in the centre of the structure, a vertical pillar (3) along which lift trucks (4) can slide from the bottom towards the top and vice-versa, these being able to lift and then lower the vehicles in order to position them on the various levels.
