54 Silver halide color photographic materials.

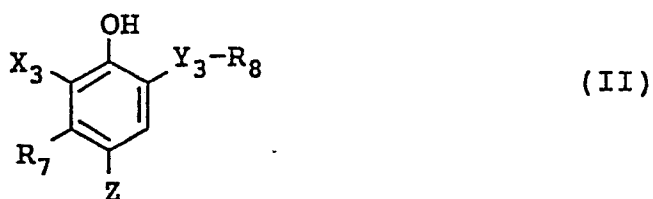

57 A silver halide color photographic material which comprises a support having at least one silver halide color photographic emulsion layer coated thereon and containing at least one compound represented by the following general formula (I) and at least one compound represented by the following general formula (II) in at least one of hydrophilic layers provided on the support:

wherein each of R₁ and R₂ represents -COOR₅ or

each of R_3 and R_4 represents hydrogen or an alkyl group; each of R_5 and R_6 represents a hydrogen atom, an unsubstituted alkyl group, an aryl group or R_5 and R_6 together form a 5- or 6-membered ring; each of Q_1 and Q_2 represents an aryl group; each of X_1 and X_2 represents a divalent bonding group or a bond; each of Y_1 and Y_2 represents a sulfonic acid group or a carboxylic acid group; each of L_1 , L_2 and L_3 represents a methine group; each of m_1 and m_2 represents 1 or 2; n represents 0, 1 or 2; each of p_1 and p_2 represents 0, 1, 2, 3 or 4; and each of s_1 and s_2 represents 1 or 2; and

wherein Y_3 represents $-\text{NHCO}-$ or $-\text{CONH}-$; R_8 represents an aliphatic group, an aromatic group, a heterocyclic group or an aryl amino group which may be substituted; X_3 represents hydrogen, a halogen atom, an alkoxy group or an acylamino group; R_7 represents a alkyl group (containing two or more carbon atoms), an acyl amino group or a nonmetallic atomic group necessary to form a 5 to 7 membered ring by the combination of X_3 and R_7 ; and Z represents a hydrogen atom or a group which can be released by coupling with an oxidized color developing agent.

The materials give stable color images in long storage, high sharpness, high sensitivity and low fogging property because of using new dyes and couplers.
