54 **Receptacle to contain disposable products.**

57 The invention comprises a container receptacle for disposable products, which is comprised of a receptacle (1) on which a covering lid (2) is fixed and this container has a mechanism to receive and hold this lid with which it establishes practically permanent, hermetic closure. Before it is fitted on definitively, this lid is held hinged onto the opening of the receptacle and can be placed at the completely open position, provisional closure and intermediate positions and finally in the permanently closed position. The receptacle has a radial protrusion (7) provided at both sides with each of two stubs (8) in which perforated flaps (9) are fitted which are integral with the lid (2) which also has a peripheral flap provided on the inside with a water-proof ledge (13) that fits into a saw-toothed staggered section (14) provided in the receptacle (1). The receptacle and the lid have been specifically designed to permit the stacking of loose lids and/or similar containers.
