54 **Apparatus for painting heating radiators.**

57 A device for painting a radiator whilst it is mounted on a wall comprises a container for paint, a paint dispenser for dispensing a flood of paint over the top and upper side walls of the radiator, and a peristaltic pump for pumping paint from the container to the dispenser. A collecting trough is also provided to collect run-off paint. The peristaltic pump acts on a continuous length of flexible tube which extends from the container and comprises the dispenser and thus no paint contacts the working components of the pump, reducing associated problems of cleaning since only the tube needs to be cleaned after use.
