⑤4 A peripheral unit for access control and remote-control integrated system.

⑤7 An integrated and modular remote-control system is disclosed, essentially constituted of a particular peripheral unit for access control.

It is possible to associate to this peripheral unit an external control unit which, possibly, allows a plurality of peripheral access control units to be connected into a single local network controlled by said control unit; moreover it is possible to set up more complex structures by connecting said peripheral access control units (directly) and/or said control units (and the peripheral unit thereby controlled) into further local and/or wide-area networks.
