(54) **Device to glue posters and the like and glueing process of them.**

(57) It permits the mechanized poster glueing, making automatic this operation, so that the deposition process will result faster and above all it can be industrialized. The device is formed by a rolls system, integrated to that one for the paste distribution. It can be portable or applicable to a mechanized arm, for glueing at inaccessible altitudes.

The poster wrapped in the container (2) of fig. (2) will be slide among the rolls (6) and (7) till to reach the application wall with the edge.

Placing the roll (6) to the wall, the tube that sprays

the paste (9) will be placed against the application wall.

Making the roll slide (6), it will be realized the poster simultaneous winding off, and the pump actuation (laterally placed to the device); this pump will aspirate the paste from the tank and will spray it through the tube (9) on the poster and on the wall.

The pump can be actuated both by the manual operator force and by an external source, electrical or oleodynamic motor type.

FIG. 2
