54 **Fragrance carriers for laundry compositions.**

57 Fragrance compounds are dispersed in a matrix of solid non-ionic or cationic surfactant to obtain a fabric softener composition, usefully added to conventional laundry detergent compositions. The softeners so prepared, when used in normal laundering processes, result in an attachment of the fragrant softener component to the laundered textile fabric. The attachment survives a subsequent drying cycle so that the laundered and dried fabric remains associated with a slow-release fragrance.
