⑯ **Slipper with upper bearing stirrups for attachment to the sole by means of a holding pin.**

⑯ This patent application for an industrial invention concerns a slipper composed of a sole molded in polyurethane or other similar material, upon which the upper is fixed by means of simple attachments in the form of pins threaded through stirrups created

for this purpose on both longitudinal sides of the upper, said pins being pushed into and held within suitably shaped recesses situated on the sides of the sole.

CATEGORY OF CITED DOCUMENTS

X: particularly relevant if taken alone
Y: particularly relevant if combined with another document of the same category
A: technological background
O: non-written disclosure
P: intermediate document
T: theory or principle underlying the invention

E: earlier patent document, but published on, or after the filing date

D: document cited in the application
L: document cited for other reasons

&: member of the same patent family, corresponding document
