## (SI) Equipment for overturning stacks of sheet material.

The stack of sheets (2) to be overturned is carried in a first frame (1) of the equipment, positioned with one edge butted against a locating surface (3) and held between two sets of prongs (4, 5) that enter into contact with the bottom and top

sheets; this first frame is hinged to a supporting second frame (6) about a horizontal first axis (x) lying parallel with the locating surface, and can also be swivelled relative to the second frame (6) about a second axis (y) normal to the locating surface (3).

- CATEGORY OF CITED DOCUMENTS

  X: particularly relevant if taken alone
  Y: particularly relevant if combined with another document of the same catagory
- A: technological background
  O: non-written disclosure

- P: intermediate document
  T: theory or principle underlying the invention

- E: earlier patent document, but published on, or after the filing date
- D: document cited in the application
- L: document cited for other reasons
- &: member of the same patent family, corresponding document
