I-20122 Milano(IT)(54) **Apparatus for automatically introducing cords and resilient strips into channels of cloth articles and the like.**

(57) The apparatus comprises a support element for arranging in a circumferential pattern a throughgoing channel (3) of a cloth article or garment, in which a comparatively resilient or flexible element (10) can be engaged which is provided, at one end, with a

gripping element (11) and is entrained on a pulley (20), driven by driving means, for recovering the flexible element engaged in the channel and associated with the cord element to be applied.
