(54) **Aerodynamic casing which is adaptable shape depending on the action of the flow released.**

(57) It is a casing that is formed around a solid -1-, thanks to the fact that it is provided with hairs, in such a way that the jet or layer of flowing medium released -5- shapes the aforementioned casing,

causing a wall to be formed which prevents the passage of energy to the captive masses of flowing medium -4- achieving an energy savings and doing away with vibration by means of this arrangement.
