**Silver halide color photographic material.**

A silver halide color photographic material comprising at least one red-sensitive emulsion layer, at least one green-sensitive emulsion layer, at least one blue-sensitive emulsion layer and at least one yellow filter layer provided on a support. With the material, the relationship between the sensitivity ( $S_G^{480}$ ) of the green-sensitive silver halide emulsion layer to monochromatic light of 480 nm and the sensitivity ( $S_B^{480}$ )

of the blue-sensitive silver halide emulsion layer to monochromatic light of 480 nm is in the range of  $-0.85 \leq S_G^{480} - S_B^{480} \leq 0.2$  when measured after the silver halide color photographic material having ISO sensitivity of S is uniformly exposed to white light of 2/S lux\*sec and the optical density of the yellow filter layer at peak wavelength is 1.0 or above.
