A fastening device for sport shoes, in particular for cross-country motorcycling boots, and a boot incorporating said device.

A fastening device comprises first and second fastening members (11,12) engageable with each other to clasp corresponding parts of the upper of a sport shoe (1) together. The first and second fastening members respectively comprise a guide (13) and a slider (25), the latter being slidable along the guide

(13) and held releasably in engagement therewith. Provided between the slider and the guide is a one-way stop means (22,33) for releasably making the slider (25) and guide (13) unitary in one of the two directions.

FIG. 2
