(54) **Toner for full colour development.**

(57) A toner for full colour development in electrophotography, in which various colour toners are overlapped, comprises a colouring agent and a binder resin having an electroconductivity of  $1.0 \times 10^{-9}$  to  $5.0 \times 10^{-9}$  (s/cm). When this toner is used for the colour development, the electric characteristics, developing characteristics and transfer characteristics are almost equal to those of other colour toners used for the same image and the developed toner quantities and transfer efficiencies can be made substantially equal and full colour development can be carried out with an excellent image reproducibility.
