(54) **A row floor-locking device for a telescoping seating system.**

(57) A row floor-locking device for a telescoping seating system having a plurality of row floors both sides of which are movably supported through poles (57) on a supporting truck (56). A front stopper (63) is attached to the forward end portion of each of the supporting trucks (56) except the innermost supporting truck (56); a rotatable plate (64) is pivotally attached by its rear end to a portion of each supporting truck (56) except the innermost and outermost supporting truck (56); a shaft (67) is attached to each

of the supporting poles (57) except those set up at the outermost side, said shaft (67) being provided on an outwardly extending free end portion thereof with a pressing member (67a) extending over the neighboring supporting truck (56) so that when the supporting trucks (56) are moved over said rotating plates (64) disposed at the outer side of the supporting trucks (56), said pressing member (67a) acts to push down the rotating plates below the free end of the front stopper (63)
