(54) **Image forming device.**

(57) The image forming device of the present invention relates to an image forming device having a moving member (4) which moves while pressing a recording material (5) against an image carrying member (2) as the means of transferring the image on the image carrying member (2) to the recording material (5). Further, the image forming device has a pair of moving members for fixing the image by conveying the recording material (5) sandwiched therebetween, of which the moving member on the side not in contact with the unfixed image is a moving member having an elastic material layer and a resin surface layer. Further, the present invention has the surface of the moving member of the fixing means (6) on the side not in contact with the unfixed image which is better mold releasability with that of the moving member (4) of the transfer means.
