W-8000 München 90(DE)(54) **Transfer apparatus.**

(57) A transfer apparatus including a photoreceptor drum (11) having a transfer position, feeding rollers (21a, 21b) for feeding out a sheet (18) of paper upward obliquely, and a guide member (30) provided between the feeding rollers (21a, 21b) and the photoreceptor drum (11) and having a guide surface on a lower surface (30b) thereof to guide the paper (18) to the transfer position along the guide surface. In the transfer apparatus, the structure is simplified

since the paper is guided by the single guide member. Moreover, the feeding of the paper can be performed smoothly, since frictional resistance is produced only on one side of the paper. In addition, the guide surface is formed on the lower surface of the guide member, so that the paper can be supplied to the transfer position of the photoreceptor drum (11) stably.
