I-42100 Reggio Emilia(IT)(54) **Automatic unit for igniting appliances containing gas rings.**

(57) An automatic ignition unit for appliances comprising a series of gas rings (21) with which there are associated respective electrical ignition heads (22) and a corresponding number of aligned taps (5), these latter containing an operating stem (50) provided with a knob (51) for sliding and rotating it, comprises a common ignition control member (12) which is hinged to the appliance (1) on an axis parallel to the line on which the taps lie, is disposed

transversely to said stems (50), and is coupled to each of these latter by a fork (11) against which the stem acts only when translationally moving in one specific direction so that said member (12) is able to rotate in response to the translational movement of any one of the stems (50), to press a common pushbutton (16) which operates an ignition device (17) common to all the ignition heads (22).

CATEGORY OF CITED DOCUMENTS			
X : particularly relevant if taken alone		E : earlier patent document, but published on, or after the filing date	
Y : particularly relevant if combined with another document of the same category		D : document cited in the application	
A : technological background		L : document cited for other reasons	
O : non-written disclosure		
P : intermediate document		& : member of the same patent family, corresponding document	
T : theory or principle underlying the invention
