**I-20123 Milano(IT)**(54) **Rear support adjustment device, particularly for ski boots.**

(57) A rear support adjustment device, particularly usable in ski boots composed of a shell (2) with which at least one quarter (3) is associated. The quarter has, in a rearward position, a recess (7) which acts as seat for a spoiler (10) which is articulated transversely to the quarter. The structure comprises a U-shaped bracket (15) the ends (14) whereof are pivoted laterally to the quarter. The bracket furthermore comprises members (17) for temporary engagement with grip members (18) defined on the spoiler. This device allows the skier to rapidly and easily vary the degree of inclination of the spoiler without varying, for example, the degree of securing of the quarter.
